Education

Simon Fraser University Expected Dec 2026

BA Hons in Cognitive and Computer Science (Dean's List, Grace Hopper Scholarship recipient)

Leadership - Editor-in-Chief, Canadian Undergraduate Journal of Cognitive Science | **Co-President & Founding Director**, SFU Blueprint | **President**, Cognitive Science Student Society

Experience

Product Manager Intern - Agents June 2026 – Present

Pebl (formerly Velocity Global)

- Shipped code-mode execution for Agent Chat SDK, enabling the agent to write code and call APIs directly instead of routing through Snowflake; cutting response latency by 67%.
- Routed support tickets through the conversational HR assistant, opening chat with full question context and escalating to human support only on failure; deflected 32% of ticket volume, cutting cost-to-serve.

Product Manager Intern (AI UX) Sept 2025 – Apr 2026

Intuit

- Drove development of Intuit Agent Chat SDK powering human-in-the-loop patterns across Android, iOS, and web, replacing free-text inputs with server-driven schemas; scaled to 12M MAU.
- Defined A2A API contracts, lifecycle events, and clickstream schema enabling bidirectional agent-to-UI communication and AI-to-human handoff; selected for executive leadership showcase.
- Launched 4 agent-UX features (including streamed reasoning, bidirectional chat, HITL cards), growing adoption from 23 to 53 partner teams, sustaining 47.8M interactions at 100% Tax Day 2026 availability.

Software Developer Intern May 2025 – Aug 2025

WorkSafeBC

- Built AI-driven UAT framework with LangChain and Playwright simulating user interactions and capturing telemetry; tripled test coverage and cut manual QA effort 40%.
- Validated 10+ AI features (search, tagging) through PoCs and stakeholder interviews; greenlit 5 features for pilot with prevention officers, surfacing prior order context during business inspections.

Associate Product Manager Intern Jan 2024 – Aug 2024

CoPilot AI

- Identified and reverted a feature driving ∼8% revenue loss through cohort analysis and churn modeling.
- Shipped a user blocklist after user research; cut unwanted interactions 52% and saved $115K annually.

Research

Undergraduate Researcher Feb 2026 – Present

University of Texas, Austin

- Audited whether museums and libraries can rely on GPT for catalog metadata: built a pipeline scoring six models on 50K Wikidata questions, finding accuracy turns on the sample (43% versus 16%), not the model.

Web Developer and AI Research Assistant Nov 2023 – Sept 2024

Rosie Lab, SFU

- Built a React/AWS pipeline validating 3K+ audio files; co-authored an ASR paper [link] and released BERSt on Hugging Face [link].

Selected Projects

SettleWell - Newcomer Resource Hub | Mobile-first web app for Canadian newcomers; 1,500+ MAU

Pause - Apple Swift Student Challenge 2026 Winner | iOS app interrupting doomscrolling

Skills & Software

Product & Analytics: A/B testing, cohort analysis, funnel analysis, KPI design, instrumentation, prototyping (Figma, v0, Cursor)

Tech Stack: Python, TypeScript, React, SQL, Datadog

AI & Agents: LLM evals, RAG, LangChain, Langfuse, Hugging Face, A2A, MCP
